# Power BI: How to Clear All Filters on a Power BI Report

It quite common to lose track of what filters you currently have applied to a Power BI report. Also, there's no out of the box way to clear them all. So, here's how to do it.
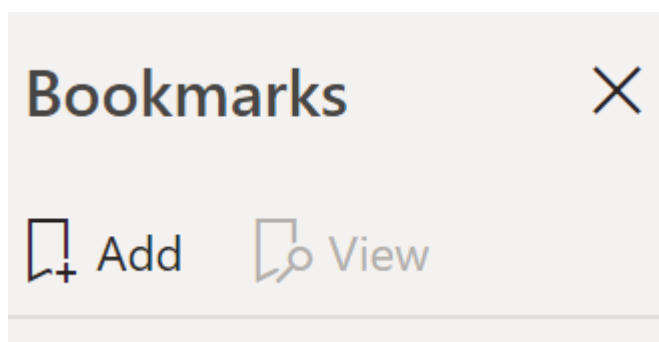

We're going to add an image and a bookmark when no filters set. When a user CTRL+clicks on the image, the bookmark will be activated and clear all filters.
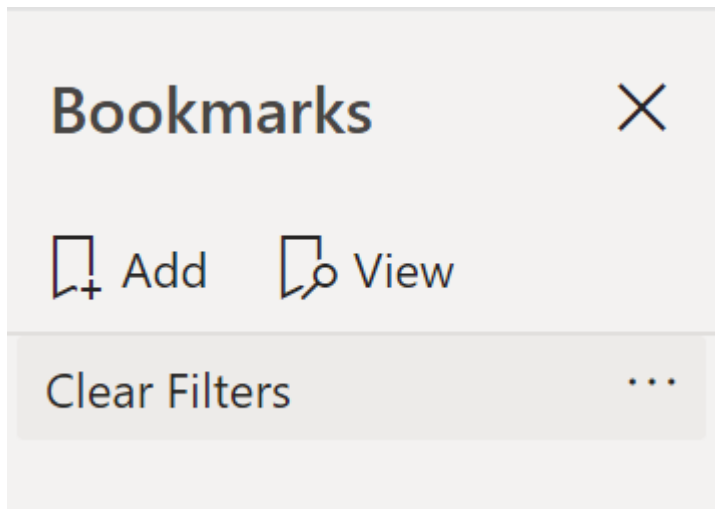

Create Bookmark

1. **Clear all filters on your report. Get it into a state that you want it to be in when the user clicks the Clear Filters button.**
2. **Go to View -> Bookmarks**

3. **Click Add**

4. **Name it Clear Filters**

Insert Image

1. **Go to Insert -> Image and select a filter image. I recommend you download this one: https://github.com/jongio/icons/blob/master/clearfilter/clearfiltericon.png**

Position and resize it to suit your needs.

2. **Click the image**
3. **In Format Image pane, turn on Action.**
4. **Select Bookmark**
5. **Select the Clear Filters bookmark. If you don't see it, turn the action toggle off and then back on.**
6. **Give it a tooltip. I entered CTRL+Click to Clear Filters. Because users might not know they need to click CTRL.**
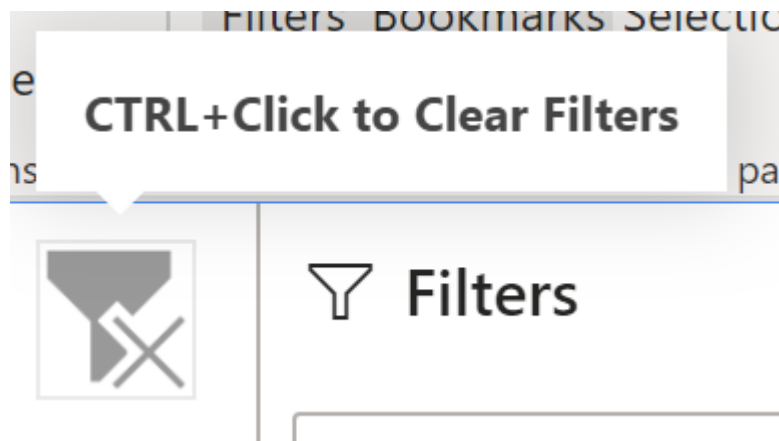

CTRL+Click the image to test it out. Publish. Profit.
